

Final Exam is Thursday, July 23, 10:30-12:30. Expect most quiz questions we have had since the mid-term exam (50 questions), plus 5 questions from the final lecture (Glaciers 2), plus 15 questions from Exam 1 (mid-term exam), plus 10 general education assessment questions. That makes a total of 80 questions on the final exam.

Review questions for Glaciers, Part II, July 20

1. Where is the world's largest continental glacier?
2. What direction does ice flow in a continental glacier?
3. How are kettle lakes formed?
4. When were most of the glacial landforms you can see today formed?
5. How is sea level related to glacial and interglacial periods?
6. What is the difference in sea ice and icebergs?
7. What is a drumlin?
8. What is the Bering Land Bridge? What two continents did it connect? What is between those continents today?
9. What is "isostatic rebound"?
10. Explain the three Milankovich variables?
