Mr./Ms. _____
Geological Survey of South Alabama
Sedimentology Division
123 University Blvd., N.
Mobile, AL 36688

Dear _____

Our television station is the leading news (and Infomercial) source in southern California. Earlier this year, we began a series of programs examining geological hazards to residents of the United States. In one weeks time, we will be discussing the role of hurricanes on sediment erosion. One of our news crew used to reside in Mobile and informed me that Hurricanes Frederic, Ivan and Katrina really impacted your region. I would appreciate a short statement (say 1 to 2 pages) explaining how these storms changed your shoreline and how hurricanes move sediment. One of our reporters will then incorporate it into our final story. Please provide references to any sources that you use so that we can confirm the accuracy of your submission

I would appreciate any assistance that you could provide us and look forward to hearing from you as soon as possible.

Sincerely,

Mrs. I.M. Plastic
Program Director, News
